

acechat-WebClient

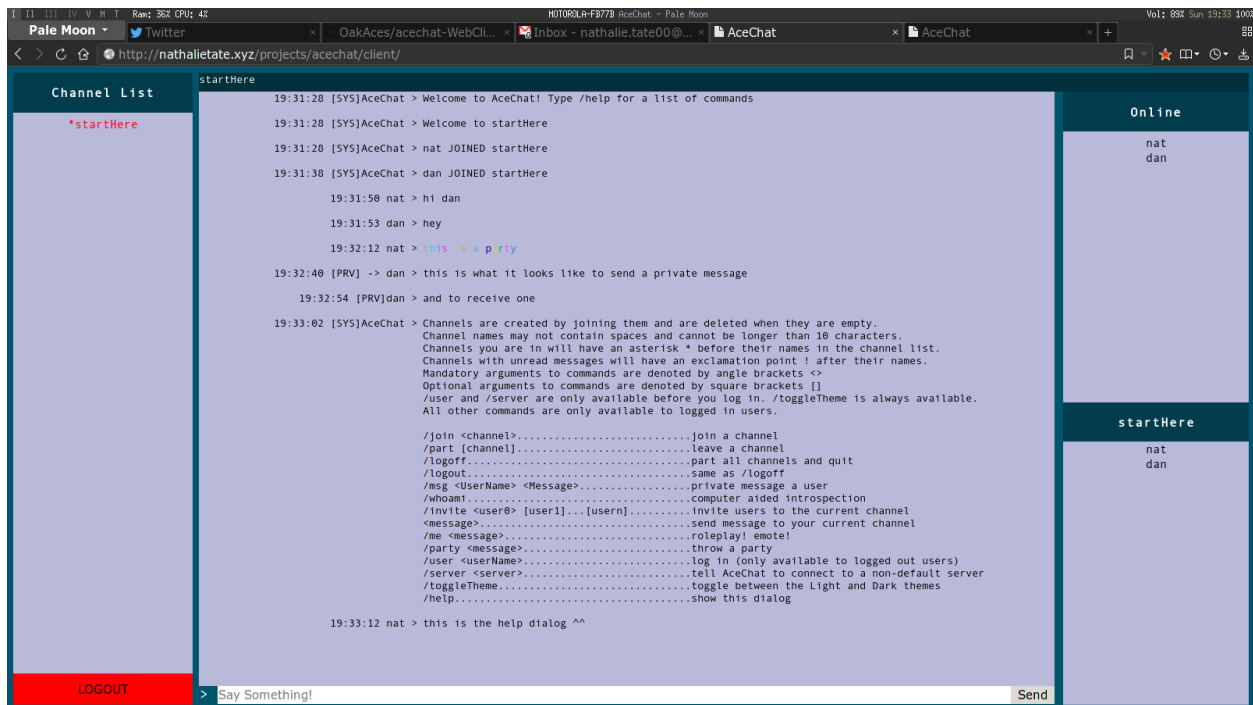

Web client for the AceChat chat server

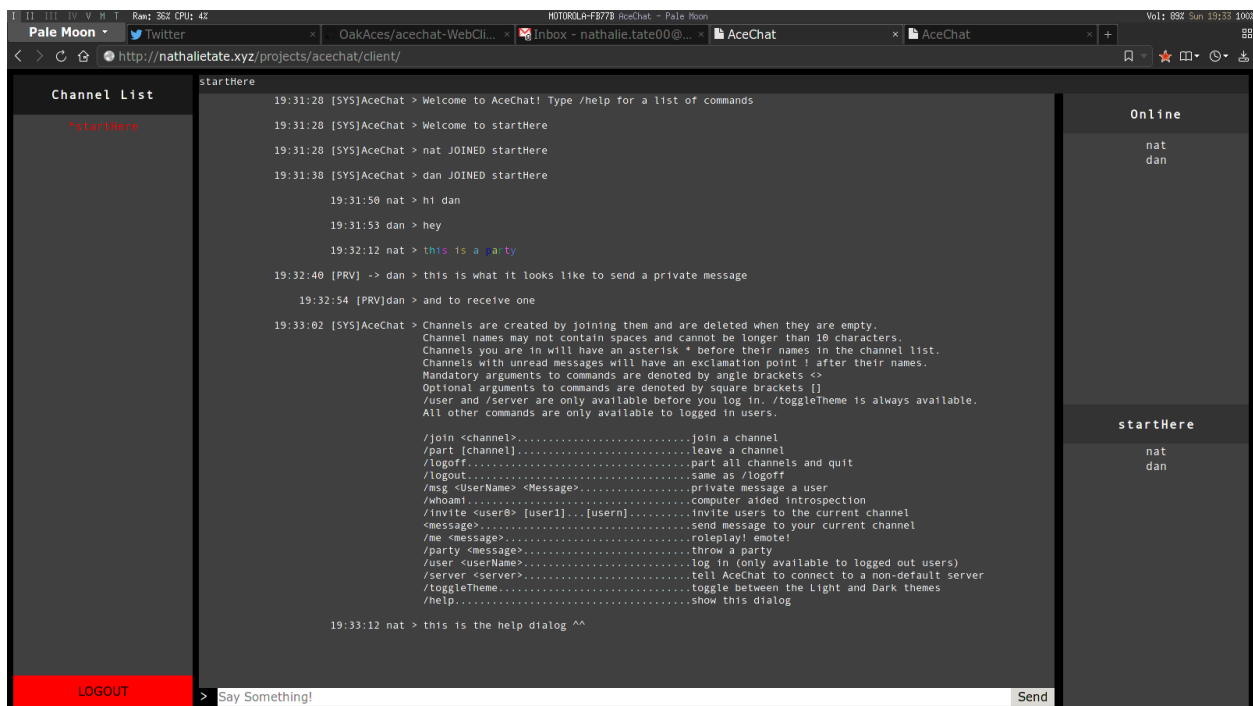

Screenshot of login dialog. There used to be a separate login page, but it has since been streamlined into one page

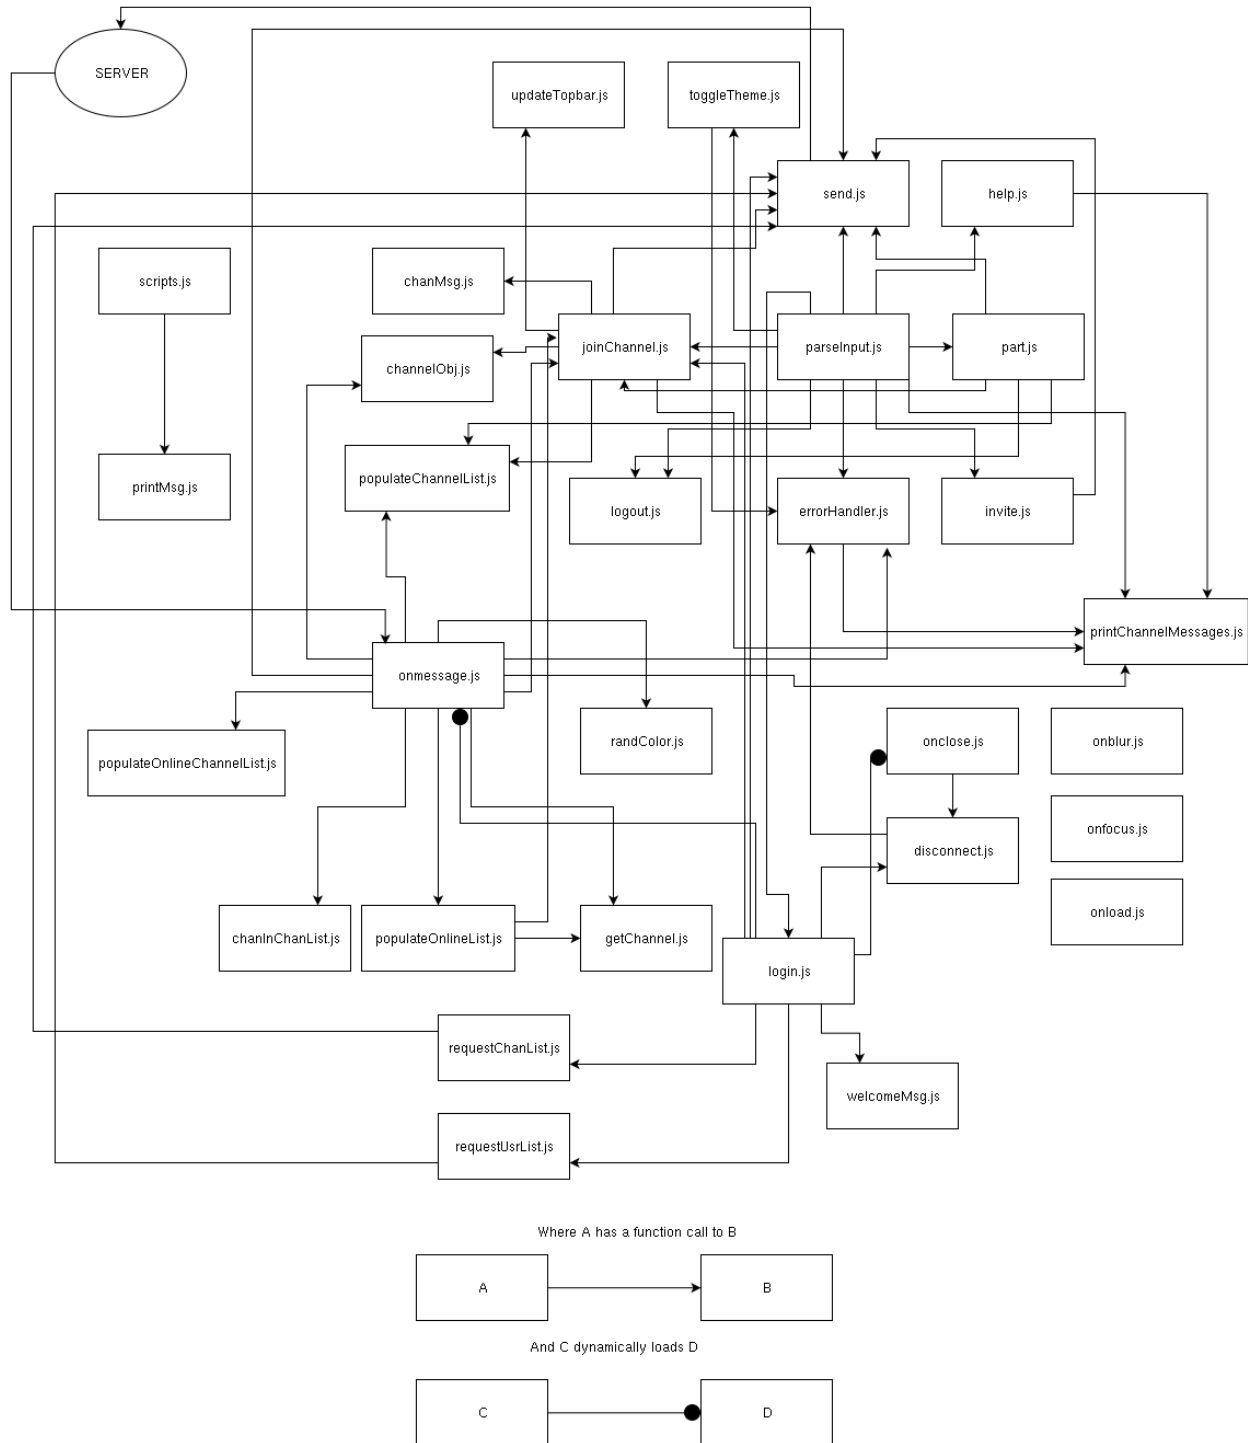

Users are not prompted with the rules for a valid user name unless they enter an invalid name

Screenshot of web UI

Users can access the original Dark theme by typing /toggleTheme

Flowchart of the program structure.

User Commands

Command	Explanation
/join <channel>	Join a channel

Command	Explanation
/part [channel]	Part a channel
/logoff	Part all channels and quit
/logout	See /logoff
/msg <userName> <message>	Send a Private Message
/whoami	Who are you?
/invite <user0> [user1]...[usern]	Invite user(s) to the current channel
<message>	Send a message
/me <message>	Roleplay
/party <message>	Throw a party
/toggleTheme	Toggle between the Light and Dark themes
/user <userName>	Set your userName (must be logged out)
/server <server>	Set the server address (must be logged out)
/help	Ask for help

Mandatory arguments to commands are denoted by angle brackets < >

Optional arguments to commands are denoted by square brackets []

/user and /server are only available before you log in. /toggleTheme is always available.

All other commands are only available to logged in users.

Client-to-Client Protocol

For an explanation of the client-to-client protocol, please see docs/clientToClientProtocol.md [x] or docs/clientToClientProtocol.pdf [x]

Accessing the Client

The client is currently available at <https://acechat.dyladan.me> [x]
